

Laboratories Approved by EPA to Support UCMR 5

EPA approved the following laboratories after they met the application requirements and Proficiency Testing (PT) criteria for the Laboratory Approval Program (LAP) supporting the fifth cycle of the Unregulated Contaminant Monitoring Rule (UCMR 5). These laboratories can analyze UCMR 5 samples using those methods marked with an “X” next to their names. Any laboratory that withdraws from the LAP or subsequently fails to meet the method and program quality assurance/quality control (QA/QC) requirements will be permanently removed from this list.

* Denotes an EPA small public water system (PWS) contract laboratory

End of List

Large public water systems (PWSs) are required to use laboratories approved by EPA to analyze their UCMR 5 samples (40 CFR 141.40(a)(4)(i)(H)). EPA will arrange for samples from small PWSs to be analyzed by approved laboratories under contract to the agency. Laboratory participation in the approval program is voluntary and is specific to laboratories analyzing samples for UCMR 5. The laboratories' approval status indicates they have demonstrated specific capabilities using the designated method(s).

Large PWSs are responsible for their UCMR 5 results and must ensure that their laboratories are following the methods and meeting the QA/QC criteria specified in UCMR 5. Laboratories must post sample analytical results and required QC data electronically via the Safe Drinking Water Accession and Review System (SDWARS) within 90 days of the sample collection date. EPA may revoke a laboratory's UCMR 5 approval status if the laboratory does not adhere to QA/QC procedures and criteria or fails to post data to SDWARS in a timely and accurate manner. If EPA revokes approval, the laboratory's name will no longer appear on this list. Once approval has been revoked, it cannot be reinstated during the UCMR 5 monitoring period.
