

West Virginia Office of Oil and Gas

Industry Workshop
Site Construction and Reclamation
October 9, 2014

Triple Rig

Horizontal Well Pad

Brushed Location

Temporary Seeding

- Where exposed soil surfaces are not to be worked for periods longer than 21 days.
- Where runoff will go directly into a stream.
- A permanent vegetative cover shall be applied to areas left unworked for more than 6 months.

Beginning Construction

Seed When on Grade

Soaking Slope to be Seeded

Slope in one Week

Interlocking Matting Boards

Locking Mats in Place

Water Control in Place

Two Weeks Later

Berm Drains In Place

Maintenance

- All re-vegetated access roads and well sites are to be maintained throughout the life of the well.
- Culverts, road ditches, etc., must be maintained in proper working order.
- Whenever the soil is disturbed on any well site or road by well-related activity, it will be re-vegetated.

Ditch Maintenance

Surface Slip Repair

Slope Tracking
